The Data-Centric Security approach focuses on protecting data at its earliest point, while de-protecting only when absolutely necessary.

SecurDPS Enterprise protects sensitive and personal data. Augmented by a broad range of integration options, SecurDPS Enterprise allow business applications to be implemented quickly with on-premise, multicloud, Big Data, and data warehouse deployments without changes in infrastructure or code.

No matter how you move, use, leave, or lose your data, it's always protected and kept private Documents

Secure your Business with Data Protection

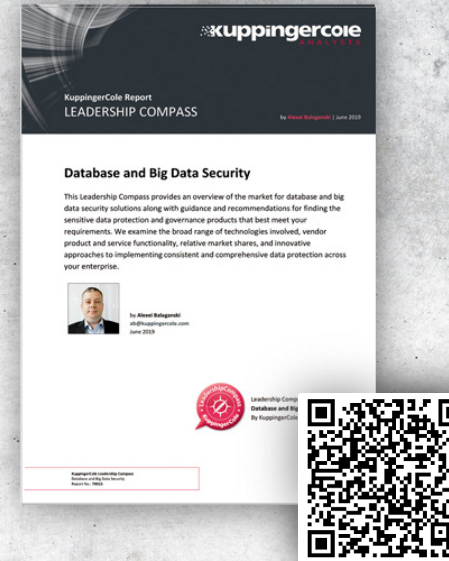

Perimeter defenses, identity access management, and intrusion detection, help deter or slow down attackers from impacting your business. However, security gaps still exist when attackers are successful at bypassing those controls. The data-centric approach, deployed by SecurDPS Enterprise is proven to be one of the most effective means at reducing the risks of a data breach or data exposure incident. SecurDPS outperforms other data security solutions by protecting data at its earliest point of entry into your systems, and by reducing the need to de-protect the data. This means your business can continue to operate, and while reducing risks of exposing data.

Enterprise Tokenization – Core Concepts & Architecture

SecurDPS Enterprise – the Secure Data Protection Suite designed for organizations of all sizes – combines the comfote patented stateless tokenization algorithm with our proven, highly scalable and fault-tolerant architecture. Augmented by a broad range of integration options, SecurDPS Enterprise allow applications to be quickly included into the enterprise-wide data protection deployment without any changes in infrastructure or code. Gain detailed insight about SecurDPS Enterprise with this Core Concepts and Architecture solution brief.

Leadership Compass Database and Big Data Security

KuppingerCole, an independent cybersecurity research and analyst firm, has positioned comfote AG as a Top Product Leader in the 2019 Leadership Compass for Database and Big Data Security. The assessment of 8 technology providers was based on analysis of product features and overall capabilities. Read this report for KuppingerCole's overview of Database and Big Data Security solutions and key capabilities.

Tokenization Explained – How to protect your data

Quick Guide to understanding Tokenization from experts who have been tokenizing customer data since 2010.
