

Unified Governance and Security Oversight for HPE Nonstop

One place to manage access, monitor activity, and prove compliance across every system

Why TAMUNIO Govern?

HPE Nonstop environments often rely on separate tools and manual processes for access control, monitoring, and audit reporting creating blind spots and administrative overhead.

TAMUNIO Govern unifies these functions under a single, policy-driven framework that delivers consistent control, real-time visibility, and automatic audit readiness. It turns fragmented oversight into continuous, verifiable governance across every system.

At a glance:

- » **Consistent Zero Trust Enforcement:** Unified control of identity, access, and policies.
- » **Real Time Risk Detection:** Live monitoring and keystroke-level audit visibility.
- » **Continuous Audit Readiness:** Evidence collected automatically, ready for review.

How It Works

TAMUNIO Govern operates across three functional layers that work together to deliver enterprise-grade HPE Nonstop governance:

- » **Centralized Administration:** Manage policies, user access, and audit settings from a single console across all nodes, eliminating manual configuration and inconsistencies.
- » **Continuous Monitoring and Detection:** Collect security-relevant events from supported sources in real time, with alarms highlighting the issues that matter most.
- » **Identity and Access Accountability:** Link every command and session to a verified user via single sign-on, and reinforce Zero-Trust standards with optional MFA for SSH and console access.

Key Benefits

- ✓ **Audit Ready by Design:**
Evidence is continuously captured, normalized, and prepared to satisfy PCI DSS, SOX, and internal audit requirements.
- ✓ **Early Threat Detection:**
Real-time monitoring and anomaly signals expose insider or privileged misuse before damage occurs.
- ✓ **Operational Efficiency:**
Multi-system policy and log management from one console reduces manual configuration time and human error.
- ✓ **Unified Governance View:**
A consolidated monitoring perspective delivers an end-to-end audit trail across supported sources, including privileged actions.
- ✓ **Consistent Controls Across Systems:**
Apply unified identity, policy, and key controls across HPE Nonstop nodes, aligned with enterprise SIEM and directory services.

REDUCE RISK
STREAMLINE COMPLIANCE
ENABLE INNOVATION

Core Capabilities

Unified Multi-System Administration

Configure policies, users, and audit parameters centrally for multiple HPE Nonstop environments.

Scalable Log and Event Streaming

Normalize high-volume security logs and automatically forward them to enterprise SIEM systems.

Real Time Alerting and Response Automation

Detect and categorize security events instantly; trigger configurable actions through SYSLOG, SNMP, or EMS.

Privileged Activity Monitoring

Capture non-bypassable keystrokes, merge with Safeguard audit, and export evidence to SIEM for compliance review.

File Integrity Monitoring

Track unauthorized file or binary changes against baselines, raising linked alarms for rapid investigation.

Enterprise Sign On Integration

Align authentication with Active Directory / Kerberos for auditable SSO.

Integrated MFA for SSH and Console Access

Employ native multi-factor authentication with time-based one-time password (TOTP) validation through Safeguard.

Use Cases

Accelerate Audit and Compliance

Automate collection and formatting of security records to align with standards.

Detect Insider or Privileged Misuse

Monitor user actions, file changes, and keystrokes in real time to spot unusual behavior.

Strengthen Authentication and Access Control

End-to-end control of privileged and admin system access.

Why work with us

- » **Deep HPE Nonstop Expertise:** Over 25 years pioneering security for the world's most demanding environments.
- » **Proven Scale & Reliability:** Deployed in high-availability, compliance-sensitive environments globally.
- » **Confidence and Continuity:** Backed by global support, certified engineers, and an active partnership with Hewlett Packard Enterprise, ensuring a modernization roadmap built to last.
