Spool EmPower

Distribute Reports in NonStop Environments with Unrivaled Flexibility
Developed by EmPower Software

Delivering reports in NonStop environments can be a complex, labor-intensive process. Spool EmPower dramatically streamlines this effort, making it faster and easier to distribute to any user, group, or system in the distributed enterprise. Prior to products like Spool EmPower, a job would just be printed to the HPE NonStop Spooler – and the operations staff had the responsibility for printing out a number of hard copy reports, finding them on the printer, separating them and then distributing them by hand to the recipient's offices. The reports could not be easily found, searched for data or indexed.

Purpose

Spool EmPower enables organizations to distribute NonStop-generated reports with unprecedented ease and efficiency. Spool EmPower is a suite of report distribution tools that enables organizations to effectively deliver reports wherever they are needed – featuring support for email, FTP, print, fax and more.

Features

Spool EmPower offers organizations complete flexibility, both in terms of how they distribute reports, and how they configure the solution. Spool EmPower features a broad set of modules that may be used individually, or collectively, ensuring organizations get exactly the report distribution capabilities they require. The Spool EmPower product set features these modules:

E-Mail Module. Using SMTP or MAPI conventions, this module distributes reports directly from the spooler to designated users' e-mail account. As a result, organizations can ensure reports get delivered in a secure and timely manner. Reports can be distributed via HTML, PDF, text, and encrypted ZIP files. This module also features capabilities for saving reports to disk.
FTP Module. This module enables users to send jobs to a standard FTP server or a secure FTP server.
Print Module. With this module, organizations can have jobs routed directly from a spooler to a range of Windows printers. This module provides a range of customization features, including capabilities for formatting the font and page orientation of reports.
Fax Module. This module enables jobs to be sent directly from the spooler to fax machines within an organization's network.
Host Module. Looking for a report distribution option that eliminates the need for PC intervention? With this module, organizations can distribute reports to all hosts via SMTP and a standard FTP server or a secure FTP server. Other features also include the ability to store a spooler job to an edit or Enscribe type file.
Reformat Module. With this module, users can extract data and customize report formatting before distribution.
Disk Save Using this option a spooler job can be stored on a local or network disk drive using a secure Windows Domain login.

Spooler jobs automatically converted to Text, PDF, Word, or Excel type documents and ZIP compressed with password before transmission or stored.
Pre-Process scripts can be run before a job is transmitted or stored. This feature lets customer implement custom processing that is done automatically every time a job is processed. Allowing custom encryption or any pre-transmission process required to meet operational requirements.

Key Features

- Deliver Critical Data via
  - Email
  - FTP Server
  - Fax
  - Specific Printer
- Secure Encryption of Data
- Reduce Reporting Costs

Benefits

Enhance Reporting Capabilities
Spool EmPower provides the extensive capabilities organizations need to enjoy faster, easier dissemination of NonStop reports. As a result, organizations can gain the timely information required to improve operations and decision making.
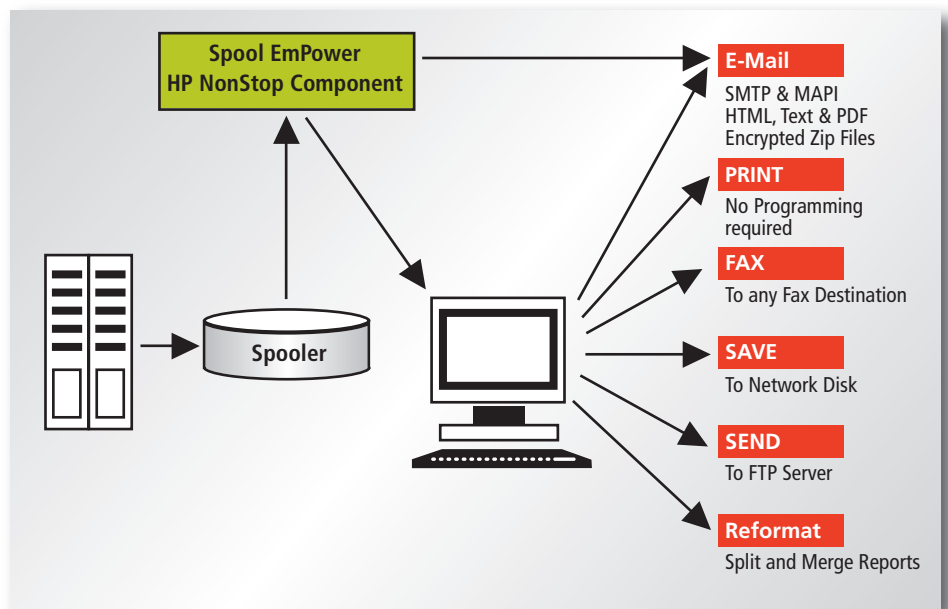

Reduce Reporting Costs
Significantly streamline the time and expense of distributing reports within an organization – without the need to do additional programming.
Plus, with Spool EmPower's flexible deployment model, administrators can choose from a comprehensive suite of products, but only pay for what they need.

Strengthen Security of Sensitive Data
Featuring support for encrypting spooler outputs, Spool EmPower helps ensure the security of data held in confidential reports.
